

Sea-R.O., Inc. Watermakers Cartridge Filtration & Replacement cartridges

Sea-R.O. stocks a wide range of filter housings and replacement cartridges for desalination system prefiltration, chlorine reduction, and taste and odor improvement in potable water.

Our pleated cartridges are manufactured with 100% synthetic fiber that will outperform cellulose (paper) or blended materials. These filters are easily cleanable which means you can re-use a number of times and save both money and storage space.

Carbon filters feature a solid block of extruded carbon, which prevents bypass and effectively removes chlorine, color, taste, and odors.

See specification sheet
for dimensions and
flow rate information.
