

Sea-R.O., Inc. Watermakers Membrane chemicals and Lubricants

Membrane Cleaners and Preservative

Sea-R.O. stocks the approved membrane cleaning and storage chemicals for all membranes currently used in desalination systems. Our cleaners consist of an alkaline (#1) and an acid (#2). Follow operation manual for cleaning instructions for your particular type of system. Our preservative (#3) is approved for use with all membrane manufacturers, but there are some watermaker manufacturers that do not recommend the use of preservative due to incompatibility with the materials of the equipment construction. Contact Sea-R.O. if you are uncertain on your particular system.

Chemicals are used at the ratio of 2 tablespoons (1 dry ounce) to 1 gallon of water. Specify #1, 2, or 3 and package size as listed below when ordering.

Package size	Mixed batch size	Price per package
1 lb (16oz)	16 gallons	\$20.00
2 lb (32oz)	32 gallons	\$30.00
40 lb (5 gallon bucket)	640 gallons	\$395.00
80 lb (10 gallon bucket)	1280 gallons	\$675.00

High Pressure Pump Oil

High pressure pump oil is a synthetic blend specifically made for CAT pumps. Dark green color is easy to see in oil level lens.

Package size	Price per package
1 quart (32oz)	\$12.00
1 gallon (128 oz)	\$39.00

Silicone Lubricant

Silicone grease is used to lubricate o-rings when replacing membranes, filters, or in servicing pumps. This is the only lubricant that should be used. Will not cause o-rings to swell. Conveniently packaged in syringe for application and to prevent any contaminants from getting into lubricant.

Package size	Price per package
1oz	\$9.95
