

Sea-R.O., Inc. Watermakers High Pressure Pumps

Sea-R.O. Is proud to offer both “Cat” and Wanner “Hydra-cell” high pressure pumps and all the necessary parts for rebuilding and servicing. These pumps are the leaders in commercial, military, industrial, and seawater desalination. Contact us for pricing and detailed data sheets.

“CAT” Ceramic Plunger Pumps

For over 30 years, CAT PUMPS has manufactured the most dependable, efficient, long lasting ceramic plunger pumps available.

CAT ceramic plungers are constructed from solid material that is highly polished and graphite impregnated to greatly enhance seal life. Unique seals will typically last 3-4 times longer than other seals.

Inventory is readily available and most orders will ship the same day.

All pumps are provided with complete and well written service manuals to allow simple field repairs and rebuilds.

A full line of 316 stainless steel pumps are designed specifically for the seawater desalination industry and have a track record for long life and smooth consistent flow. “CAT, the Pumps with Nine Lives”.

Wanner “Hydra-cell” Positive Displacement Pumps

The unique positive displacement Hydra-cell pumps operate by rotating a “wobble plate” that smoothly and sequentially contacts the three individual hydra-cell pistons that transfers the energy through a diaphragm to the liquid being pumped. Seal-less design provides for maximum life with minimum down time.

“Hydra-cell” pumps have been proven in extensive use by the US Navy, Coast Guard, Commercial fishermen, Dive charter, and land based desalination plants.

Made in The USA and supported by a worldwide distribution and service network, “Hydra-cell” pumps and parts are readily available anywhere in the world.

Quiet, smooth operation and easy maintenance have given “Hydra-cell” pumps the reputation as the pumps that are “Simply Built to Last”
