

# Sea-R.O., Inc. Watermakers Carbon Fil tration Systems

Sea-R.O., Inc. Carbon fil tration systems are designed to reduce chl orine, col or, objectionabl e taste and odor, and organic contaminants from fresh water. Chl orine and sul fur taste in water is detected by human taste at very low level s. These fil ters remove these contaminants and l eave the water heal thier and great tasting

Carbon fil tration is the singl e most successful method of treatment and al most al ways wil l give positive resul ts..

These fil ters al so cl arify the water and remove sediments. If heavy sediments are present, a mul ti media fil ter shoul d be used prior to the carbon fil ter to el iminate the sediment.

Carbon fil tration can be easil y added to existing systems and pl umbed in to improve water qual ity throughout a facil ity, or instal led at the l ocations where water is actual ly used onl y for drinking, cooking, or ice making.

Sea-R.O. al so can provide smal l er cartridge type carbon fil ter systems for appl ications where singl e outl ets are to be treated.
